

Roofing Report

White Roofs a Great Choice All Year

Do you believe a white roof is ideal for summer but won't "warm up" like black does in winter? With a Duro-Last Cool Zone roofing system, 87% of the sun's energy is reflected which is ideal for summer. More facts about white vs. black roofing:

1

Most air conditioning units have efficiency ratings performed at 95°F so as rooftop temps rise, efficiency drops. Black roof surface temps can reach 180°F on summer days.

2

Roofs are commonly snow covered in winter, converting them to "white" and eliminating any potential black roof heat gain.

3

Cloudy skies and a less direct sun angle in winter compared to longer sun exposure directly overhead makes white surfaces more energy efficient for a greater amount of time each year.

4

UV and IR rays that penetrate dark roof surfaces can lower the effective R value of insulation. White roof surfaces can remain 8°F cooler than black on hot days.

If you'd like more details on why white beats black for a roofing choice (and how it can also help obtain LEED and LEED-EB certification), request our Wintertime or Summertime spec sheet. [CLICK TO CONTACT US](#) 

Strong Storms Mean Lots of Roof Debris

Spring rains turned into summer thunderstorms. At Precision we didn't get calls about leaking roofs which confirms our quality installation. However we were enlisted to repair areas where tree limbs were driven with such force they slammed through a roof membrane. A small area is much more cost-effective to repair than if you allow the puncture to remain and it compromises the roof structure. Make certain to check your roof for debris on a regular basis.

We Have a Plan for Reroofing Over Time

You may be like many of our customers who own multiple or larger buildings that they find challenging to budget for an entire reroof all at once. We'll work with you to create a plan to reroof sections or specific buildings based on their condition or age. That has been a great solution for many since it allows budgets to be predetermined for a number of years and assures the roof integrity.

Transpo Self-Storage has a number of buildings with different types of roofs in multiple locations.

We have been reroofing either a section (small as 5,000 square feet) or entire Transpo building for a number of years.

White membranes have proven a great choice as we reroof for Transpo.

THE PRECISION TEAM IS RECOGNIZED WITH AWARDS

Our own Tim Steiner, (center of photo), his daughter Eva and son Evin, display the Admiral Club plaque during the Duro-Last national sales meeting. The award recognizes outstanding achievement in quality workmanship, customer satisfaction, and 2018 sales volume. We also earned the Elite Contractor status; a combination recognition for quality of and total combined square footage installed. Over the past three decades, the Precision team scored an average of 98 out of 100 by Duro-Last inspectors for installation quality on all our projects combined. This marks our twelfth consecutive award-winning year; and the fourth for Admiral Club.

In addition, we earned an A+ rating from the Better Business Bureau; continuing that status since 2004.

And we were named a Finalist in the Roofing Company category for the 2019 Reader's Choice Best of Sheboygan County awards as determined by the Sheboygan Press.
